

Business Insights Report – Bank Marketing Campaign Analysis

Prepared By: Akshitha Reddy Kallem

Data Analytics Internship – SkillCraft Technology

Objective:

The objective of this project was to perform Exploratory Data Analysis (EDA) on a Bank Marketing Campaign dataset and identify the factors influencing customer subscriptions to term deposits. The analysis focuses on understanding customer behaviour, campaign effectiveness, and business opportunities for improving marketing performance.

Dataset Overview:

The dataset contains 11,162 customer records with 17 attributes, including demographic information, account details, previous campaign outcomes, and subscription status.

Analysis Performed:

- Data cleaning and preprocessing
- Missing value and duplicate analysis
- Customer age distribution analysis
- Job and education analysis
- Balance and financial profile analysis
- Contact method effectiveness analysis
- Campaign performance evaluation
- Previous campaign outcome analysis
- Correlation analysis using a heatmap

Key Findings:

- Customer demographics such as age, job, and education influence subscription behaviour.
- Customers with higher account balances tend to have better subscription rates.
- Contact methods significantly affect campaign success.
- Customers who responded positively to previous campaigns are more likely to subscribe again.
- Increasing the number of campaign contacts does not always improve conversion rates.

Recommendations:

1. Focus marketing efforts on customer groups with higher conversion rates.
2. Prioritize the most effective communication channels.
3. Target customers with successful previous campaign interactions.
4. Optimize campaign frequency to avoid excessive customer contact.

5. Use customer profile insights to design personalized marketing campaigns.

Conclusion:

The analysis provides valuable business insights into customer behavior and campaign effectiveness. By focusing on high-potential customer segments and optimizing marketing strategies, the bank can improve term deposit subscription rates and maximize return on marketing investment.
